

CliniChat - Chat Communication

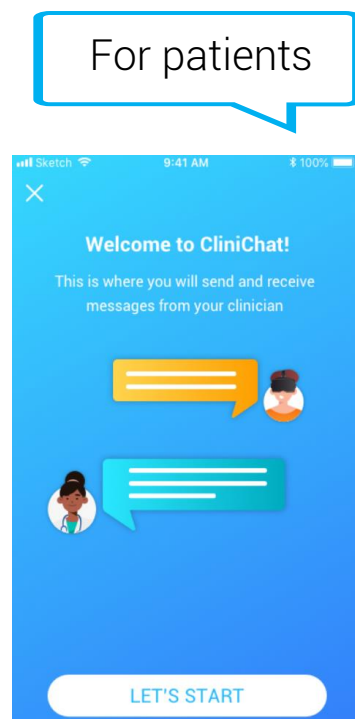

A communication channel between XRHealth clinicians and their patients

Web Data Portal interface

For clinicians

Mobile app interface

CliniChat is a secured and HIPAA-compliant communication channel

- All written communication between clinicians and patients should be only via CliniChat
- We expect patients to download and frequently use XRHealth Mobile App to talk with their clinician via CliniChat

FAQ's

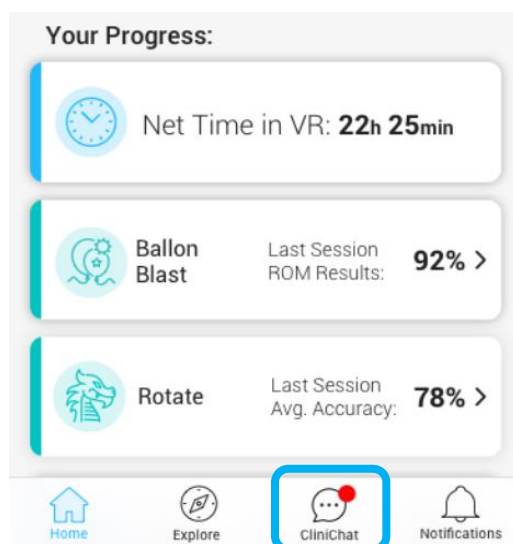

How can I see notifications for unread messages?

In the mobile app, a red notification dot will appear next to the 'CliniChat' button to indicate that there are unread messages. In addition, You can enable push notifications to get notifications on new messages while not using the app.

What file formats can be sent as attachments?

The following five formats are supported by CliniChat as attachments: PDF, JPG, PNG, MP4, and MOV

The red notification button indicates that there are unread messages.

You should enable push notifications to get notifications on new messages while not using the app.

Here you can send and receive attachments with your clinician
